Pricing Options for Retrofit Kit

Customers who want only a single price for each item in the machine use only the first three menu items to set prices for a single product, entire row or the entire machine. This includes card readers as well. The DP (Dual Price) menu sets optional prices for an item, row or machine typically used if cashless pricing is higher than standard pricing. Most customers do not use dual pricing even if a card reader is being used. Any additional convenience fee for credit card use typically is set on the backend server for your particular cashless provider. Since all prices default to 99.95, dual pricing should be OFF by default. A customer can confirm dual pricing is off by viewing ENTIRE MACH DP price set to 99.95.

The options in service mode to change or set prices are the following:

SINGLE PRODUCT – put cash/card pricing here

ENTIRE ROW – put cash/card pricing here

ENTIRE MACHINE – put cash/card pricing here

SINGLE PROD DP –do not use

ENTIRE ROW DP –do not use

ENTIRE MACH DP – confirm option set for \$99.95
